

Giant Type (height: 2.5 à 3.1m)

JOBO

The best ally for rational fertilising

THE GROWERS' FEEDBACK:

- **Hardy** - maintains its yield despite seasonal stresses
- **Cylindrical bunches** - omogeneous fruit size throughout the bunch
- **High-diameter fruits**
- **Bunches easy to cut**

	To choose for:		To choose for:
	Conventional agriculture	With regular deleafing*	In nitrogen limiting conditions**
Bunch weight (kg)	46	38	40
Ratooning (j)	186	197	208
Fruit number	248	231	218
Fruit Length (cm)	22.7	21	20.8

The data comes from a varietal trial conducted in the French West Indies from 2019 to 2022.

* a difference of -3 leaves relative to the control (conventional agriculture) was maintained throughout the cycle. The harvest was carried out at 0 leaves.

** nitrogen soil concentration below 50 mg/kg, the critical threshold.
