

Dwarf Type (height: 1.8 à 2.5 m)

MONA

Small but highly productive!

- An exceptional number of fruits
- Ideally suited to greenhouse cultivation
- Suited to subtropical climates

| | To choose for: | | |
|-------------------|--------------------------|-------------------------|-----------------------------------|
| | Conventional agriculture | With regular deleafing* | In nitrogen limiting conditions** |
| Bunch weight (kg) | 40 | 36 | 27 |
| Ratooning (j) | 186 | 188 | 278 |
| Fruit number | 283 | 297 | 250 |
| Fruit Length (cm) | 19.6 | 19.1 | 17.8 |

The data comes from a varietal trial conducted in the French West Indies from 2019 to 2022.

* a difference of -3 leaves relative to the control (conventional agriculture) was maintained throughout the cycle. The harvest was carried out at 0 leaves.

** nitrogen soil concentration below 50 mg/kg, the critical threshold.
