

Giant Type (height: 2.5 à 3.1m)

RUBY[®]

The new benchmark

THE GROWERS' FEEDBACK:

- 3 hands more than a Grande Naine
- Nematode-tolerant
- High yields despite a nitrogen stress
- Maintains its yield despite severe deleafing

	To choose for:		
	Conventional agriculture	With regular deleafing*	In nitrogen limiting conditions**
Bunch weight (kg)	40	40	38
Ratooning (j)	188	184	251
Fruit number	270	270	250
Fruit Length (cm)	21.6	20.6	19.3

The data comes from a varietal trial conducted in the French West Indies from 2019 to 2022.

* a difference of -3 leaves relative to the control (conventional agriculture) was maintained throughout the cycle. The harvest was carried out at 0 leaves.

** nitrogen soil concentration below 50 mg/kg, the critical threshold.
